SAND EQUIVALENT TEST SET

It is used to determine the geometric properties of aggregates—specifically the content of fine particles—in accordance with EN 933-8, ASTM D2419, and AASHTO T176 standards. The Sand Equivalent Test Set comprises four graduated plastic cylinders with stoppers, a weighted foot assembly (stainless steel), a blow tube, a steel ruler, plastic tubing with a clamp, a plastic funnel, and a 5-liter siphon assembly with a stand. The shaker device must be ordered separately.
